

# Disinfection and Sterilization Guideline

## WHAT TO KNOW

This guideline provides recommendations for disinfection and sterilization in healthcare facilities.

## TABLE OF CONTENTS DISINFECTION AND STERILIZATION GUIDELINE

- Updates
- Authors, Disclosure, Acknowledgements
- Recommendations for Disinfection and Sterilization in Healthcare Facilities
- Introduction, Methods, Definition of Terms
- A Rational Approach to Disinfection and Sterilization
- Disinfection of Healthcare Equipment
- Factors Affecting the Efficacy of Disinfection and Sterilization
- Cleaning
- Disinfection
- Chemical Disinfectants
- Miscellaneous Inactivating Agents
- Regulatory Framework for Disinfectants and Sterilants
- Neutralization of Germicides
- Sterilization
- Steam Sterilization
- Flash Sterilization
- Low-Temperature Sterilization Technologies
- Ethylene Oxide "Gas" Sterilization
- Hydrogen Peroxide Gas Plasma
- Peracetic Acid Sterilization
- Microbicidal Activity of Low-Temperature Sterilization Technologies
- Bioburden of Surgical Devices
- Effect of Cleaning on Sterilization Efficacy
- Other Sterilization Methods
- Sterilizing Practices
- Reuse of Single-Use Medical Devices
- Conclusion & Web Resources
- Performance Indicators
- Glossary
- References
- Executive Summary
- Tables and Figure
- Table 1. Methods of sterilization and disinfection
- Table 2: Properties of an ideal disinfectant
- Table 3: Epidemiologic evidence associated with the use of surface disinfectants or detergents on noncritical environmental surfaces
- Figure 1. Decreasing order of resistance of microorganisms to disinfection and sterilization and the level of disinfection or sterilization
- Table 4: Comparison of the characteristics of selected chemicals used as high-level disinfectants or chemical sterilants
- Table 5: Summary of advantages and disadvantages of chemical agents used as chemical sterilants or as high-level disinfectants
- Table 6: Summary of advantages and disadvantages of commonly used sterilization technologies
- Table 7: Minimum cycle times for steam sterilization cycles
- Table 8: Examples of flash steam sterilization parameters
- Table 9: Characteristics of an ideal low-temperature sterilization process
- Table 10: Factors Affecting the Efficacy of Sterilization

- Table 11: Comparative evaluation of the microbicidal activity of low-temperature sterilization technology of carriers sterilized by various low-temperature sterilization technologies (based on tests of inoculated carriers in lab setting)
- Table 12: Suggested protocol for management of positive biological indicator in a steam sterilizer
