

69405.8 Stratospheric Ozone Depletion Potential

(a)

This hazard trait is defined as the capacity for a chemical substance to deplete stratospheric ozone and, thereby, contribute to higher levels of ultraviolet B radiation reaching the earth's surface.

(b)

Evidence for the stratospheric ozone depletion hazard trait includes but is not limited to: listing of a chemical substance in the Montreal Protocol or by the U.S. Environmental Protection Agency pursuant to section 612(a) of the Clean Air Act as a substance that depletes stratospheric ozone.
