

5.3 Validation Edits

iQIES has validation edits designed to monitor the timeliness and accuracy of MDS record submissions. If transmitted MDS records do not meet the edit requirements, the system will provide error and warning messages on the provider's Final Validation Report.

Initial Submission Feedback. For each file submitted, the submitter will receive confirmation that the file was received for processing and editing by iQIES. This confirmation information includes the file submission identification number (ID), the date and time the file was received for processing as well as the file name.

Validation and Editing Process. Each time a user accesses iQIES and transmits an MDS file, iQIES performs three types of validation:

1. **Fatal File Errors.** If the file structure is unacceptable (e.g., it is not a ZIP file), the records in the ZIP file cannot be extracted, or the file cannot be read, then the file will be rejected. The Submitter Final Validation Report will list the Fatal File Errors. Files that are rejected must be corrected and resubmitted.
2. **Fatal Record Errors.** If the file structure is acceptable, then each MDS record in the file is validated individually for Fatal Record Errors. These errors include, but are not limited to:
 - Out of range responses (e.g., the valid codes for the item are 1, 2, 3, and 4 and the submitted value is a 6).

- Inconsistent relationships between items. One example is a skip pattern violation. The resident is coded as comatose (B0100 = 1) but the Brief Interview for Mental Status is conducted (C0100 = 1). Another example is an inconsistent date pattern, such as the resident's Birth Date (Item A0900) is later than the Entry Date (Item A1600).

Fatal Record Errors result in rejection of individual records by iQIES. The provider is informed of Fatal Record Errors on the Final Validation Report. Rejected records must be corrected and resubmitted, unless the Fatal Error is due to submission of a duplicate assessment.

3. **Non-Fatal Errors (Warnings).** The record is also validated for Non-Fatal Errors. Non-Fatal Errors include, but are not limited to, missing or questionable data of a non-critical nature or item consistency errors of a non-critical nature. Examples are timing errors. Timing errors for a Quarterly assessment include (a) the submission date is more than 14 days after the MDS assessment completion date (Z0500B) or (b) the assessment completion is more than 14 days after the ARD (A2300). Another example is a record sequencing error, where an Entry record (A0310F = 01) is submitted after a Quarterly assessment record (A0310A = 02) with no intervening Discharge assessment (A0310F = 10 or 11). Any Non-Fatal Errors are reported to the provider in the Final Validation Report as warnings. The provider must evaluate each warning to identify necessary corrective actions.

Storage to iQIES. If there are any Fatal Record Errors, the record will be rejected and not stored in iQIES. If there are no Fatal Record Errors, the record is saved into iQIES, even if the record has Non-Fatal Errors (Warnings).

Detailed information on the validation edits and the error and warning messages is available in the MDS 3.0 Data Submission Specifications on the CMS MDS 3.0 website and in the Error Messages guide.
